SUMMARY

Pre-final year B.Tech Computer Science (AI & ML) student experienced in building AI-driven pipelines, agentic workflow automation, and cloud-deployed machine learning systems. Hands-on with Python, Java, REST APIs, and AWS services, with a track record of converting ML prototypes into deployment-ready architectures. Strong foundation in debugging, orchestration frameworks, evaluation of ML model outputs, and collaborative Git-based development, backed by a public GitHub portfolio of end-to-end AI/ML projects.

EDUCATION

Dayananda Sagar University, Bengaluru B.Tech in Computer Science Engineering (AI & ML)	<i>Expected May 2027</i> CGPA: 7.0/10
STG PU College, Karnataka Pre-University Course (PCMB), Karnataka State Board	<i>2020 – 2022</i> 91.33%
SSLC, Karnataka State Board Secondary School Leaving Certificate	<i>2020</i> 92.64%

TECHNICAL SKILLS

Languages: Python, Java, SQL, Node.js, C

Core Concepts: OOP, Data Structures & Algorithms, REST APIs, Debugging, Clean Code

AI Agents & Automation: n8n workflow orchestration, agentic pipeline design, prototype-to-deployment automation

Data Engineering: Pandas, NumPy, Matplotlib, Apache Spark, PySpark, SQLite, EDA

Machine Learning: Ensemble Models, NLP, VADER Sentiment Analysis, Feature Engineering, Model Evaluation

Cloud/Tools: AWS S3, AWS Lambda, AWS EC2, Git, Streamlit

PROJECTS

Trade IQ — Automated Stock & Crypto Analysis Portal	<i>2025 – 2026</i>
- Built a real-time trading platform monitoring 14+ Indian stocks, US stocks, and cryptocurrencies. - Developed ML ensemble models for BUY/SELL/HOLD predictions using RSI, MACD, and Bollinger Bands indicators. - Integrated VADER and TextBlob sentiment analysis on financial news feeds. - Automated end-to-end pipeline orchestration with n8n, converting the ML prototype into a production-style deployment workflow. - Deployed the application using Streamlit with SQLite integration.	
Distributed Log Analyzer	<i>2024</i>
- Processed over 1 million server logs using Apache Spark DataFrames, following scalable engineering best practices. - Improved execution speed by 80% by reducing pipeline runtime from 45 seconds to 9 seconds. - Built dashboards for analyzing system health and error frequency trends.	
Smart Agriculture Monitoring System	<i>2024</i>
- Built an IoT crop monitoring system using Raspberry Pi, DHT11, BH1750, and motion sensors. - Collected real-time humidity, soil moisture, and light intensity data. - Integrated AWS S3 for cloud storage and improved alert accuracy by 28%.	
XAI Explainability & Fairness Toolbox	<i>2024</i>
- Built an explainability and model-evaluation toolbox in Python/Keras to audit ML models for bias and fairness, directly addressing the kind of evaluation and guardrail checks required before an AI prototype is production-ready. - Implemented a full suite of XAI visualizations (feature attribution, fairness metrics, bias detection) using the EthicalML library to make model decisions interpretable to non-technical stakeholders. - Ran fairness evaluations across demographic subgroups and documented guardrail recommendations to flag models before deployment.	

CERTIFICATIONS & PUBLICATIONS

- AWS Cloud Practitioner Essentials
- Published Article on Artificial Intelligence Bias in Real-World Systems

ACHIEVEMENTS

- Participated in 3 Hackathons and 1 Protothon, building rapid AI/ML prototype solutions under time constraints.
- Contributed to open-source projects at FOSS Meet using collaborative Git workflows.
- Maintain a public GitHub portfolio (github.com/poorav20) showcasing end-to-end AI/ML project work.

RELEVANT COURSEWORK

Data Structures & Algorithms, Machine Learning, Database Management Systems, Operating Systems, Cloud Computing, Object-Oriented Programming.
